KLIFF EMMANUEL JASME

Junior Software Developer | Web & Application Development

Consolacion, Cebu, Philippines | 09924684380 | jasmekliffemmanuel@gmail.com | github.com/kliff-dev

PROFESSIONAL SUMMARY

Computer Engineering graduate (2026) who builds, integrates, deploys and tests web, mobile and desktop software. Shipped a live Supabase-backed rental website, extended a bilingual vocabulary app on a school's PHP/MySQL stack, and built a Node.js task-management prototype with 175 automated tests. Directs AI coding agents and tests every result.

TECHNICAL SKILLS

- **Languages:** JavaScript, TypeScript, PHP, SQL, Dart, C#, C++, HTML, CSS
- **Front end:** Responsive HTML/CSS, vanilla JavaScript, React, Vite, Flutter
- **Back end and data:** Node.js, PHP, MySQL, SQLite, Supabase (Auth, Postgres, row-level security, Storage), Firebase (Auth, Realtime Database, Cloud Messaging, Cloud Functions), REST APIs
- **Testing and tooling:** Node.js test runner, Flutter test, Git and GitHub, VS Code, Netlify, FTP deployment, ESP32 and Arduino
- **AI-assisted development:** Claude Code and OpenAI Codex for implementation, content integration, test generation, code review and troubleshooting; I set the goal and expected behavior, supply references, then review and test the result.

WORK EXPERIENCE

Web Developer (short-term, probationary) | Move Up Academy, English language academy **October 2026**

- Expanded a single-file vocabulary prototype (four word lists) into Word Lab, a bilingual Chinese/English web app with two practice modes, book and unit navigation, and 26 textbook word lists with over 3,000 entries.
- Added per-student progress saving through a PHP/MySQL API that reuses the academy's student login session (batched saves, retries, cross-site request rejection) and server-side text-to-speech with a browser fallback and US/UK accents; deployed updates by FTP and updated the PHP student dashboard and speaking tool.
- Built an Internal Management System prototype in Node.js and SQLite with server-enforced admin and employee permissions, a submit-and-review task workflow, notifications, comments, a calendar view and 175 passing automated tests.

Technical Staff Intern (OJT) | Microlinx Solutions Inc. **May 18, 2025 – June 23, 2026**

- Assembled and configured desktop computer systems; installed Windows, drivers and software applications.
- Diagnosed and resolved hardware and software issues.

SELECTED PROJECTS

Bellton Heavy Equipment Rental | Independent client project | HTML, CSS, JavaScript, Supabase, Netlify **2026**

Live site: bellton.netlify.app

- Built and deployed a responsive rental website with a live quote calculator (equipment hourly rate × rental duration × hours per day) and validated inquiry forms.
- Implemented sign-up, sign-in, password reset and inquiry history on Supabase Auth and Postgres, with row-level security policies so customers see only their own inquiries.
- Built the admin area (inquiry status, admin notes, notifications) and an in-page content editor with edit history stored in Supabase; deployed on Netlify with a static build step and a Content Security Policy.

DevTrack | Personal developer dashboard (in progress) | React, TypeScript, Vite, Node.js **Oct 2026**

- Tracks projects, coding time and next actions without manual logging: a dependency-free Node.js collector parses Claude Code transcripts, the Codex SQLite thread index and git history, splits work into sessions by idle gaps and attributes it to projects.
- 33 automated tests (Node.js test runner) cover the parsers, session splitting, statistics and sync merging; all pass.

LuxLock Biometric Security System | Group capstone | Flutter, Dart, Firebase, ESP32, Arduino C++ **2026**

Code: github.com/kliff-dev/luxlock_app

- Fingerprint-controlled three-compartment display case: Flutter app (PIN gate, per-case enrollment, master override, history logs) on Firebase Auth and Realtime Database; Cloud Functions that push tamper alerts via Cloud Messaging and prune history; ESP32 firmware for the fingerprint sensor, actuators and ADXL345 tamper detection. My part: firmware and wiring/power debugging, enrollment flow, app-to-cloud-to-device communication, no-hardware Flutter tests.

EDUCATION

Bachelor of Science in Computer Engineering | University of Cebu – Banilad Campus **2021 – 2026**

Achievements: ICPEP Regional Competition (C++ Programming); College Intramurals Mathematics Quiz Champion, back-to-back
